More BIM/Revit® Models Available for Venmar CES Products

Saskatoon, SK (July 25, 2012) – Venmar CES is pleased to announce that our **entire** Light Commercial Energy Recovery Product Line is now available as BIM/REVIT models. Now that this detailed information is available online through Seek and Autodesk® Revit software, it has never been easier to incorporate energy recovery ventilation at the very beginning of the design cycle.

The latest models that have been incorporated are:

- HRV450w, HRV1000w
- HRV600i, HRV700i, HRV1200i

The first batch of models has proved to be extremely popular with a huge number of page views and downloads. We have also been working with Autodesk to improve the classification and key word search algorithms so that is even easier to find the equipment that you require.

We encourage you to visit our Autodesk [Seek page](#) to view models for all Light Commercial products.

About Venmar CES

Venmar CES is well known as a pioneer in commercial air-to-air energy recovery ventilation. With over 60 years of experience, we are committed to providing cost-effective Dedicated Outdoor Air Solutions® and to being our customers' first choice in creating quiet, comfortable, healthy indoor environments.
