Venmar CES–University of Saskatchewan Research Partnership

Saskatoon, SK (November 30, 2012) – A long standing partnership between Venmar CES and the University of Saskatchewan College of Engineering is resulting in a new heat exchanger technology that promises to cut building heating and cooling costs by up to 80 percent. A prototype of the heat exchanger was on display at a collaborative media event with the University of Saskatchewan and Venmar CES in November as part of 'Open Doors – Open Knowledge', a series of events promoted by the Association of Universities and Colleges of Canada (AUCC) at a number of universities across Canada.

For more information on the technology and to view coverage of the media event, visit Global Saskatoon's [website](#).
